

(a) target $\exp(-Ay^2)$ vs basis envelope ψ_0

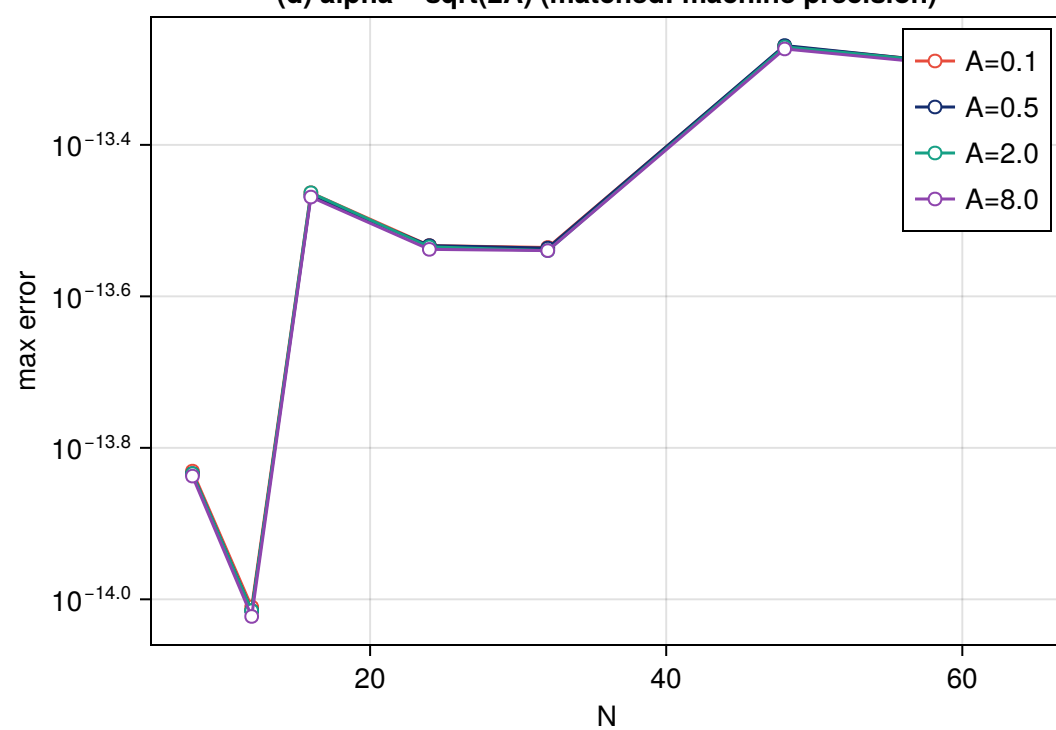

(b) Coefficient decay at $A = 8.0$

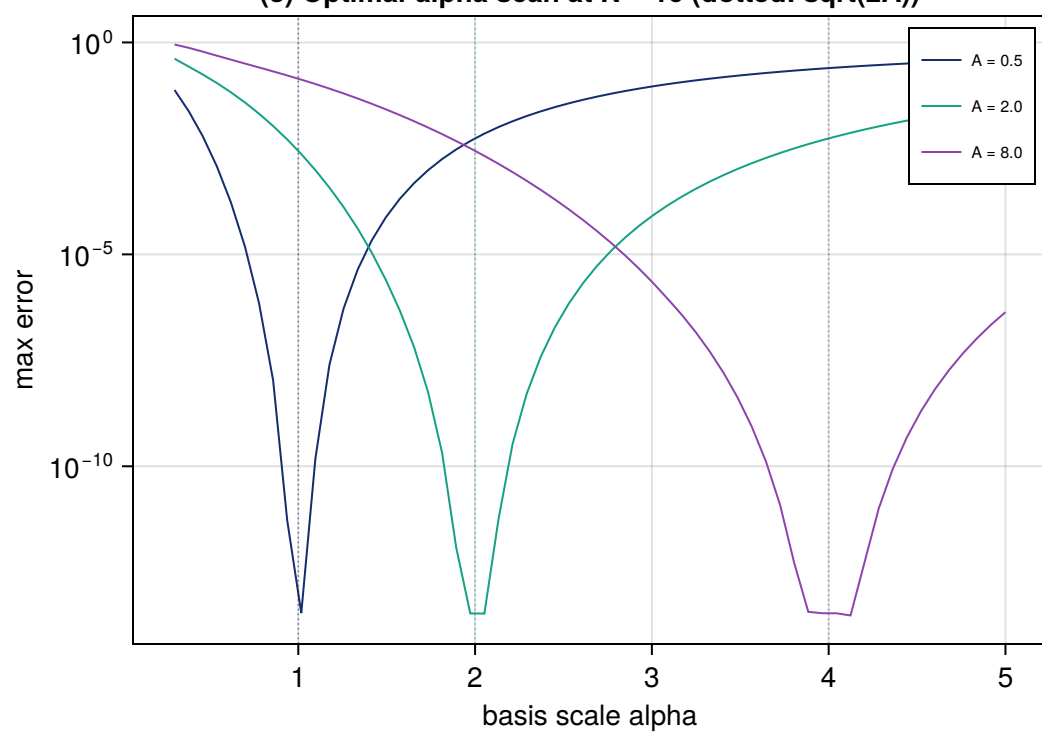

(c) $\alpha = 1$ (unscaled)

(d) $\alpha = \sqrt{2A}$ (matched: machine precision)

(e) Optimal-alpha scan at $N = 16$ (dotted: $\sqrt{2A}$)

(f) QHO ground state: basis matches physics
